Key Benefits

Intercom System, Dynamic Mesh Communications (DMC™) - Meet THE COMM-SET Headset,

a uniquely dynamic intercom system with self-healing capabilities that connects up to 15 randomly moving team members.

The always-on, full-duplex, hands-free communication technology is a 100% autonomous network (no need for any base station), designed to perform under the toughest environments.

Full-Duplex Communication Technology

Multiple intercom networks can operate in the same terrain allowing several teams to speak simultaneously without interruption.

Hands-Free Operation

Natural Voice Operation and Always on Communication allow hands free operation – no need to press buttons or turn dials. The always-on communication technology provides the utmost in safety. Team members can operate/activate the system simply by voice commands such as "Radio On," allowing team members to keep their hands free and focus on their tasks.

100% Autonomous Network

With the PRO-1, no additional base station is necessary, so it works anywhere without the need for additional equipment. Autonomous networks allow team communication where standard systems are blocked or are non-operational.

Level Dependent / Listen Through

Reduces impulse noises and allows ambient noise including amplification of the human voice.
